## Handheld X-ray Systems

"I have two NOMADs and my staff considers them the only way to take radiographs."

**Marty Jablow, DMD**  
Woodbridge, NJ

---

"The NOMAD Pro is a hand held intraoral x-ray machine that is more versatile and easier to use than traditional wall mounted x-ray units. The light weight design makes it great for use in multiple operatories, and it can even go outside the office for clinics, special needs, or humanitarian use. NOMAD Pro represents a radical change in how we take radiographs and has the potential to completely disrupt the existing radiology paradigm."

**Larry Emmott, DDS**  
Phoenix, AZ

---

"The NOMAD gives us the flexibility to go from room to room. When we treat patients in the hospital, we can easily bring the NOMAD to the patient and get information at bedside. Since we work out a large number of operatories, it was much more cost efficient to use one NOMAD rather than install a wall-mount in each room. Our staff quickly adapted to using the portable system, and we are very satisfied with the images it produces."

**David Altman, DDS; Eric Sung, DDS**  
UCLA School of Dentistry

Starting now, being "off the wall" is a good thing.

# More Praise for the NOMAD Handheld X-ray System

"When I built my office, I had to decide whether to use wall mounted x-ray machines or go with the NOMAD Pro Handheld X-ray. Now we are using the NOMAD Pro on a daily basis. One NOMAD Pro saved the money in construction costs vs. the cost of multiple wall mounted x-ray machines for a four-operatory solution we have in our practice. Very well worth it!"

**Joseph Hidalgo, DDS**  
**Plano, TX**

The NOMAD is the best x-ray unit I know for taking x-rays during more difficult procedures such as root canals and implants. It takes excellent quality images, it's more convenient, and it saves me time. I no longer have to move the chair or manipulate the patient to get the x-ray position I need. I feel completely safe using the NOMAD. I have worn x-ray exposure badges for several months and have not had any radiation readings. It has been a great addition to our practice and I believe it is a great addition to dentistry.

**Eileen Bidstrup, Dental Assistant**  
**Vogel Dental, Provo, UT**

"It's called the NOMAD because it can go just about anywhere. I don't have to worry about the limitations of having a machine that's tied to the wall. I can place myself and the film and the patient much more easily because I can walk around with the machine."

**Robert P. Langlais DDS, MS**  
**University of Texas at San Antonio**  
**Health Science Center**

"The NOMAD has been a fantastic product for our company. These innovative devices are extremely user friendly, cut down the amount of time to take x-ray images, are amazingly durable, and have proven to be much more reliable than other x-ray devices we have tried. At this point we have over 30 NOMADs in operation and each of them are used extensively throughout the year. Regardless of the clinic setting, I have no reservation recommending the NOMAD to any potential buyers."
